DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: In page 14, line 1, change "the receiver antenna (83)" to -- the receiver antenna (87)--.

Appropriate correction is required.

Claim Objections

2. Claim 12 is objected to because of the following informalities: In claim 12, a period (.), should be added after "open". Appropriate correction is required.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-50 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-69 of U.S. Patent No. 6,690,170. Although the conflicting claims are not identical, they are not patentably distinct from each other because they commonly comprise the antenna for an electromagnetic logging tool having a dielectric core, an electrical conductor disposed

on the core such that the antenna has a first magnetic dipole moment substantially perpendicular to the longitudinal axis of the core, a second electrical conductor disposed on the core such that the antenna has a second magnetic dipole moment substantially perpendicular to the longitudinal axis of the core...
